Next Door to Perfection

OUR your milk into an I H C cream separator. Out of the cream spout will come close to 9,999 parts of cream for only one part that goes into the skim-milk pail. That's marvelously close separation; it means every possible dollar of dairy profit from your cows.

It takes an I H C separator to do such efficient work. It is made for that, for every detail has its use, every mechanical point its purpose. Its construction fairly bristles with good features. Shafts and spindles are the strongest made for separators. Bearings all have phosphor bronze bushings. Gears work without back lash and never develop it, and they are protected from dirt and grit. Oiling system is complete. In short, everything in

I H C Cream Separators

Dairymaid, Bluebell or Lily makes for great strength and durability. Perfect adjustment and balance mean smoothness and ease in operating, hence continued satisfaction during long life. Simplicity of mechanism is a chief feature. That means easy cleaning. There are four sizes of each style.

Then if you have a one-horse power back-gear I H C engine to complete your separator outfit, you will soon find that an indispensable helper on the farm. The engine is mounted on a portable truck and can be detached and used for many small farm jobs. It will run at the proper speed to pump water, run washing machine, churn, grindstone, etc.

The local I H C dealers will demonstrate the many sources of saving that the I H C separator outfit will give you. Catalogues may be obtained from them, or, write to
